Important Information

Thank you for purchasing the **GCC Jaguar II Cutting Plotter**.

Before you use the cutting plotter, please make sure that you have read the safety precautions and instructions below.

![Safety Precaution](image)

**SAFETY PRECAUTIONS!**

- For safety concern, please always hold the cutter firmly **from the bottom** while moving it. Do not move the cutter by clasping the depression area on both sides.

  ![Correct Incorrect](image)

- Do not shake or drop the blade holder, a blade tip can fly out.
- During an operation, do not touch any of the moving parts of this machine (such as the carriage). Also be careful to make sure that clothing and hair do not get caught.
- Always connect the power cable to a grounded outlet.
- Always use the accessory power cable which is provided. Do not wire the power cable so that it becomes bent or caught between objects.
- Do not connect the power cable to branching outlet to which other machines are also connected, or use an extension cable. There is danger of overheating and of mis-operation of the machine.
- Keep the tools away from children where they can reach.
- Always put the pinch rollers within the white marks.
Warning

Never press the top release grip and pull the bottom release grip at the same time as the pictures shown below:

O (CORRECT)  X (INCORRECT)

Press down  Press down

DISABLE  Stop Bar

Pull up bottom to release grip

ENABLE

Note:
In case the grips clipped together due to your wrong operation, please use a tweezers to pull out the stop bar when pressing down the top release grip. Keep the stop bar outside then release the grips as the right figure.
1. General Information

1.1 Introduction
Jaguar II series cutting plotters have been designed to produce computer-generated images or perform contour cutting on sheets or rolls of vinyl media.

This manual covers the following models of Jaguar II series cutting plotters:

<table>
<thead>
<tr>
<th>Model</th>
<th>Width Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>JII-61</td>
<td>50mm (1.97”) ~ 770mm (30.3”)</td>
</tr>
<tr>
<td>JII-101S</td>
<td>50mm (4.7”) ~ 1270mm (50”)</td>
</tr>
<tr>
<td>JII-132S</td>
<td>50mm (4.7”) ~ 1594mm (62.7”)</td>
</tr>
</tbody>
</table>

1.2 Package Items
The package of the Jaguar II model contains the items listed below, please check carefully. If you find any item missing, please consult your local dealer for further assistance.

<table>
<thead>
<tr>
<th>Standard Item</th>
<th>Quantity</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Cutting Plotter</td>
<td>1</td>
</tr>
<tr>
<td>2. Stand Set (for JII-101S/132S only) (Optional for JII-61)</td>
<td></td>
</tr>
<tr>
<td>● 2 piece of T-shape stand</td>
<td></td>
</tr>
<tr>
<td>● 1 piece of stand beam</td>
<td></td>
</tr>
<tr>
<td>● 18 pieces of M6 screws</td>
<td></td>
</tr>
<tr>
<td>● 1 piece of M5 L-shape hexagon screw driver</td>
<td></td>
</tr>
<tr>
<td>● 1 piece of Installation Guide for Stand Set</td>
<td>1</td>
</tr>
</tbody>
</table>
### 3. Flexible Media Support System Package

<table>
<thead>
<tr>
<th>Items</th>
<th>101S/132S</th>
<th>61</th>

</tbody>
</table>

### 4. Accessories
- 1 piece of User’s Compact Disk
- 1 piece of AC power Cord
- 1 piece of data cable (USB cable: 1.8m)
- 1 set of Blade Holder Assembly (Installed in tool carriage of the cutting plotter, include a blade)
- 1 piece of Safe Blade
- 1 piece of Cutting Pad for Vinyl cutting
- 1 pair of Tweezers
- 1 piece of Promise Card

### 1.3 Product Features

The following are the main features of the Jaguar II series cutting plotters:

- Dual-port connectivity provides you with greater flexibility
- Up to 600-gram cutting force
- Up to 60-inch/per second cutting speed
- Guaranty 10-meter tracking
- User friendly, multi-language control panel
- Ingenious media basket (optional item)
1.4 The Front View of Jaguar II (Figure 1-1)

Grid Drums – move the media back and forth during operation.

Tool Carriage – performs the cutting with the installed blade and pen.

Control Panel – consists of 14 control keys showing messages and menus.

Slicer Groove – slice off the extra media easily along this groove.

Cutting Pad – provides the protection of blade when the blade is cutting.

Platen – provides the surface for holding and supporting media while performing cutting.

Figure 1-1

1.5 The Back View of Jaguar II (Figure 1-2)

Lever – raises or lowers the pinch rollers.

Pinch Rollers – hold the media during cutting.

Figure 1-2
1.6 The Whole View of Jaguar II (Figure 1-3)

**Roll Holder** – holds and supplies the roll media for cutting.

**Roll Holder Guide Bushes** – serve to keep the roll media in place when media is pulled from the roll.

**Roll Holder Support** – supports roll holders.

**T-Stand** – supports the cutting plotter

**Stand Beam** – stabilizes the body.
1.7 The Left-hand Side of Jaguar II (Figure 1-4)

Figure 1-4

- Power Switch – On when switches to [I]; Off to [O].
- Fuse – 3 Amp.
- AC Power Connector – used to insert the AC power cord.

1.8 The Right-hand Side of Jaguar II (Figure 1-5)

Figure 1-5

- Serial Interface Connector (RS232C) – used to connect the cutting plotter to a computer through a serial interface cable.
- USB Connector – used to connect the cutting plotter to a computer through a USB cable.
2. Installation

2.1 Precaution
Please read below information carefully before you start installation.

**Notice 1**
- Make sure the power switch is off before installing the cutting plotter.
- Carefully handle the cutter to prevent any injuries.

**Notice 2** Choosing a proper place before setting up the cutting plotter
Before installing your cutting plotter, select a suitable location, which meets the following conditions.

- The machine can be approached easily from any direction.
- Keep enough space for the machine, accessories and supplies.
- Keep the working area stable, avoiding severe vibration.
- Keep the temperature between $15$ and $30{\degree}C$ ($60-86{\degree}F$) in the workshop.
- Keep the relative humidity between $25\%$ and $75\%$ in the workshop.
- Protecting the machine from dust and strong air current.
- Preventing the machine from direct sunlight or extremely bright lighting.

**Notice 3** Connecting the Power Supply
Check the plug of the power cord to see if it matches with the wall outlet. If not, please contact your dealer.

- Insert the plug (male) into a grounded power outlet.
- Insert the other end (female) of power cord into the AC connector of cutting plotter.
2.2 Stand & Flexible Media Support System (JII-101S/132S)

**Step 1**
Please examine supplied items in the accessory box of stand carton:

- 2 pieces of base beams
- 2 pieces of side beams
- 1 piece of stand beam
- 20 pieces of M6 screws
- 1 piece of M5 L-shape hexagon screw driver
- 1 piece of Installation Guide for Stand Set

**Step 2**
- Remove the plotter body and the accessories from the shipped carton.
- Assemble the base beam to the side beam with 2 screws to form a T-shape stand.
  (See Figure 2-1)

Please pay attention to the direction of the base beam (the wheel on the front end of the beam comes with a break while the rear one is on its own).
Step 3
Place the stand beam upright on the T-stand and follow number ①② to assemble. (See Figure 2-2 & 2-3)

Step 4
Position the stand beam perpendicularly to part ① and put the screws into the holes and tighten them as Figure 2-3. Then the complete picture of stand will be like Figure 2-2.
Step 5
Remove the cutting plotter from the carton. Position your stand under the plotter, and then insert the screws into the holes on plotter’s bottom and tighten them up as shown in Figure 2-4.

Figure 2-4
Step 6
Insert the roll holder support with the screws into the holes of the stand, and then tighten them up as shown in Figure 2-5. You could decide roll holder support’s position by inserting into different holes.

Step 7
Place the roll holder 1 onto the roll holder support (Figure 2-6).
Step 8
Turn the screw counter-clockwisely for around three times after unpacking roll holder 2.

Step 9
Insert the end of the roll holder without the damper into the left roll holder support and then insert the end of the roll holder with the damper into the right roll holder support. Ensure the white protrusion is wedged in the groove.
Step 10
Tighten the screw on the damper until it is securely attached to the right roll holder support.

Step 11
Lastly, the complete picture will be shown like below. (Figure 2-7).
2.3 Desktop Flexible Media Support System (For J4-61 only)

**Step 1**
Please examine the following items in stand carton’s accessory box:
- 1 set of Roll Media Flange (2 pieces)
- 1 set of Roll Holder (2 pieces)
- 1 set of Roll Holder Guide Bushes (4 pieces)
- 1 set of Roll Holder Support (2 pieces)
- 1 set of Desktop Support Bracket (2 pieces)
- 4 pieces of Plastic Foot
- 4 pieces of M4 screws
- 12 pieces of M6 screws
- 1 piece of M4 L-shape hexagon screw driver
- 1 piece of M5 L-shape hexagon screw driver
- 1 piece of M6 L-shape hexagon screw driver (for adjusting the screws of Roll Holders)
- 1 piece of Installation Guide for Roll Holder

**Step 2**
Put the 4 Plastic Foot under the Roll Holder Support and insert the M4 screw into the hole of Plastic Foot and tighten them with the M4 L-shape screw driver. (Figure 2-8)

**Step 3** Position the Desktop Support Brackets beside the Roll Holder Support and insert M6 screws into the Roll Holder Support and tighten them with M6 L-shape screw driver. (Refer to Figure 2-9).
Step 4
Put the bottom of machine in lateral, and position the Roll Holder Assembly beside the bottom of the machine. Then, insert the M6 screws into the holes of Roll Holder support assembly and tighten them with M6 L-shape screwdriver. Like Figure 2-10.

![Figure 2-10](image1)

M6 screws
Screw holes
Roll Holder Assembly

Step 5
Place the two roll holders into the holes of Roll Holder Support (Figure 2-11). To install the roll holder with damper, please refer to chapter 2.2, step 8 to step 10.

Step 6
The complete Desktop Media Support System will be shown as in Figure 2-12

![Figure 2-12](image2)
2.4 Instruction of Damper Roller

Turn the wheel as instructed below to adjust damping. The bigger the number is, the stronger the damping. The volume symbol sticker indicates the damping level.
2.5 Blade Installation

Figure 2-12 is the illustrator of the blade holder. Insert a blade into the bottom of the blade holder and remove the blade by pushing the pin. Make sure that your fingers are away from the blade tip.

![Figure 2-12](image)

**Step 1**
Install blade (Figure 2-13).

![Figure 2-13](image)

**Step 2**
Push the blade to the bottom of the blade holder. (Figure 2-14).

![Figure 2-14](image)

**Step 3**
Adjust the blade tip to suitable length by screwing “Blade tip adjustment screw” clockwise or count-clockwise.

**Tips:**
“The proper length” means the blade’s length is adjusted 0.1mm more than film’s thickness and it can completely cut through the film layer yet avoid penetrating the backing.
Step 4
Insert the blade holder into tool carriage. Please note the outward ring of the holder must put into the grooves of carriage firmly (see Figure 2-16), then fasten the case (Figure 2-17).

![Figure 2-16](image1.png) ![Figure 2-17](image2.png)

Step 5  Use the reversing steps to remove the blade holder.

Caution
The blade will lose its sharpness after a period of usage, the cutting quality might be affected. By increasing the cutting force, it might do the trick. However, once the blade is worn out and no longer provides a reliable cutting, you should replace a new one. The blade is consumable and must be replaced as often as necessary to maintain the cutting quality. The quality of the blade deeply affects cutting quality. So be sure to use a high quality blade to ensure good cutting results.
2.6 Automatic Blade Length Detection

Figure 2.-18 is the new blade holder with a scale and the carriage with a mark. This blade holder detects blade length automatically and shows how the knob needs to be turned on the LCM.

There are 10 units on the scale; each unit equals to 0.05 mm, allowing you to adjust the blade length for 0.00mm-5.00mm (Figure 2-18).

Follow the steps below to adjust the length of the blade:

1. Keep the blade tip within the blade holder before you start adjusting.
2. Align one of the scales on the blade holder to the mark on the carriage
3. Select “Blade Length Adjust” under “CUT TEST” on the LCM, enter the blade length wished in “Set Length”; test the blade holder first and then test the blade length by pressing ENTER.

Note: Keep the blade holder at the same position when you perform blade holder and blade length tests.

4. When blade holder and blade length tests are finished, the screen will show you to what degree (the unit of the value following “CW” or “CCW” is “circle”) and in which direction [CW (clockwise) or CCW (counterclockwise)] you should turn the adjustment knob.
EG, Turn CW 5 is telling you that you should turn the knob for 5 units clock-wisely (Figure 2-20, Figure 2-21).

5. The screen will show "Adjustment completes" when the value on the screen is 0, the blade length is perfect and no more adjustment needs to be made. Press "Enter" now to complete the process and you may start cutting at this point.
2.7 Media Loading

2.7.1 Loading the Sheet Media
To load the media properly, please follow the procedures listed below:

**Step 1**

Use the lever on the upper right side of the cutting plotter to raise or lower down pinch rollers. Pull the lever forward until it makes a clicking sound then the pinch rollers are raised (Figure 2-22).

![Lever](image)

**Figure 2-22**

**Step 2**

Load your media on the platen and slide it under the pinch rollers from either the front side or the backside. The **alignment rulers** on the platen extension will help you to adjust the media precisely.

![Alignment Rulers](image)

**Note:**
Be sure that the media must cover the paper sensors on the platen when loading the media. At least one of the two paper sensors (Figure 2-23) should be covered. Once the media covers the sensor, the cutting plotter will size the media width and length automatically.

![Paper Sensors](image)

**Figure 2-23**
Step 3

Then move the pinch rollers manually to the proper position. Be sure the pinch rollers must be positioned above the grid drum. The **white marks** on the top trail will remind you where the grid drums are (Figure 2-24).

![White marks](image)

Figure 2-24

Step 4

Push the lever backward to lower down the pinch rollers.

Step 5

Turn on the power; the tool carriage will measure the size of the media automatically. And the plotting cutter begins to work.

**Note:**

1. Always adjust the position with the pinch roller raised.
2. Move the pinch roller by applying force at the rear portion of the pinch roller support.
3. Do not move it by holding its front rubber roller (Figure 2-25).

![Incorrect](image)

Figure 2-25
2.7.2 Loading the Roll Media

Step 1
Put the roll holder guide bushes on two roll holders (Figure 2-27).

Note:
Please pull up the bottom of all pinch rollers (Figure 4-5) before the lever is pushed backwards to ensure accurate media width detection.
-- Option A (Use the media flanges) (Recommended)
Insert a roll media flange at the end of each roll media and tighten the thumbscrew until the roll media is firmly gripped (see Figure 2-28).

Then put the roll media on the roll holders. Adjust the position of the roll media ensure that media flanges are able to run in the grooves of roll holder guide bushes (Figure 2-29).

-- Option B
Insert the two roll holders into the roll media support set then place the roll media directly between the two roll holders (Figure 2-30).
Step 3
Load the media on the platen. Please refer to “2.6.1 Loading the sheet media”. After loading the roll media, flatten the media on the platen and hold the front edge of the roll media firmly (Figure 2-31).

![Figure 2-31](image1)

![Figure 2-32](image2)

Step 4
Turn the roll downward to make an equal tension across the media (Figure 2-32)

Step 5
Move the pinch rollers to the appraise location and note that the pinch rollers must be positioned above the grid drums.

Step 6
Push the lever backward to lower down the pinch rollers.

Step 7
Fix roll holder guide bushes on the roll holder to secure the roll media.

Step 8
Turn on the power switch and select Roll, Edge or Single mode appropriate for one time setup, or set to Default Roll in Sizing Setting and Roll type sizing will be performed when the machine is turned on. Then the cutting plotter is ready to work.

Step 9
Use the reverse steps to remove the media.

Note:
Make sure that the media tension is equally distributed from left to right. If the media were not tightened enough against the platen, it would cause tracking problems!
2.8 Tracking Performance

In order to achieve the best tracking performance for a long plot, we recommend some significant media loading procedures described as follows:

If the media length is less than 4 meters, leave the margin of 0.5mm—25mm in the left and right edges of the media (Figure 2-33).

![Figure 2-33]

If the media length is greater than 4 meters, leave at least 25mm margin on the left and right edges of the media (Figure 2-34).

![Figure 2-34]

Please refer to the paragraph “2.11 How to Make A Long Plot” for more details.
2.9 Cutting Force and Offset Adjustment

Before sending your designs for cutting, you may perform a “cut test” to generate satisfactory cutting results. The “Cut Test” should be repeated until the appropriate cutting conditions for the media are discovered.

After sizing the media, press [CUT TEST] button to select the “square cut”, and press [ENTER KEY] to confirm.

The default cutting force and offset value of the cutting test are 80gf and 0.275mm respectively. Press [ARROW KEY] to move the tool carriage to the position where you like. Then, press the [ENTER KEY] to perform Cut Test.

Note: At the same time, the new origin is also set at the cutting test position.

When the cutting test is completed, a pattern appears. Peel off the pattern to see if it can be easily separated from the media base. If yes, the setup tool force is appropriate. If not or cut through the back paper, press [FORCE KEY] to adjust the tool force until an optimum force is obtained (Figure 2-35).

If the pattern appears to be BB or CC layout, press [OFFSET KEY] to adjust the offset value until AA pattern discovered.

![Figure 2-35](image-url)
2.10 How to Cut 3mm Letters

To obtain good quality output, narrow media is recommended. However, if wide media is used, you should:

1. Position two pinch rollers as close as possible to both edges of the cutting area.
2. Make sure the loaded media is held flat with equal tension across the platen.
3. Suggested operation settings:
   - Tool force: 55 gf. (or depending on the material)
   - Cutting speed: 45-50 cm/sec
   - Tool up speed: 45-60 cm/sec
   - Smooth cut: Disable
   - Quality: Small Letter

2.11 How to Make A Long Plot

When you are making a long plot with a roll of heavy and wide vinyl, paper you need to use the “AUTO UNROLL MEDIA “ function. The following parameter settings are to help users get the best cutting quality. The actual output quality may vary when using different kind of materials

1. If the length of graphic is between 3m and 5m, the cutting speed is better slower than 72cm/sec and the cutting quality is set as Normal.
2. If the length is longer than 5m or if the material type is difficult to cut, it is better to further slow down the cutting speed.
3. After loading the roll media all pinch rollers are raised at this stage, flatten the media on the platen and hold the front edge of the roll media firmly (Figure 2-36).

Figure 2-36
Then turn the roll downward to make an equal tension across the media (Figure 2-37).

Make sure that the media tension is equally distributed from left to right. If the media is not tight enough against the platen, it will cause tracking problems.

4. Engage pinch rollers.
5. Fixes roll media guide bushes on the roll holder to secure the roll media.
6. The protrusion length of the blade should be longer than the thickness of the vinyl. (Please check the “Blade Specification: About the Tool” in Appendix.) After you notice all the above, you’ll enjoy your gigantic signs production!

2.12 When Completing the Cutting Job

After completing the cutting job, raise the sheet-loading lever, and then remove the material. You can also cut off the finished job by the Safe Blade (a standard accessory) along the knife guide. (Figure 2-38)
3. The Control Panel

This chapter describes the button operations with the LCM menu flowcharts of Jaguar II. When the cutting plotter is ready for use as described in Chapter 1 & 2, all functions are under default parameters.

3.1 The LCD Panel

<table>

### 3.4 Menu Items

Below describes the functions of menu items

<table>
<thead>
<tr>
<th>Menu or Key</th>
<th>Function</th>
<th>Setting</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Media sizing</strong></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Roll</td>
<td>To measure media width.</td>
<td>Maximum Tracking 150 meters</td>
<td></td>
</tr>
<tr>
<td>Edge</td>
<td>To measure media width and pull the media back till the front paper sensor open.</td>
<td>Maximum Tracking 150 meters</td>
<td></td>
</tr>
<tr>
<td>Single</td>
<td>To measure media width and length.</td>
<td>Maximum Tracking 10 meters</td>
<td></td>
</tr>
<tr>
<td><strong>[SPEED]</strong></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Speed</td>
<td>To set or modify tool speed at horizontal moving.</td>
<td>3~153cm/sec; 3cm/sec per step</td>
<td>72cm/sec</td>
</tr>
<tr>
<td>Up Speed</td>
<td>To set or modify tool speed at vertical moving.</td>
<td>3~153cm/sec; 3cm/sec per step</td>
<td>72cm/sec</td>
</tr>
<tr>
<td>Cutting Quality</td>
<td>To set or modify cutting quality.</td>
<td>Draft, Fair, Normal, Fine, Small Letter</td>
<td>Normal</td>
</tr>
<tr>
<td>While cutting small letter, set as “Small letter”.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>While cutting in high speed, set as “Draft”.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>For normal operation, set as “Normal”.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>[FORCE]</strong></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>To set or modify the value of tool force.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>For Jaguar II_61/101/132SC, when the cutting force exceeds 450g, the maximum cutting speed would be 15cm/sec and the cutting quality would be Small Letter Mode (0.2g) and while the cutting force is 300g-449g, the maximum cutting speed would be 30 cm/sec and the cutting quality would be Fine Mode (0.5g)</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>600gram; 5 gram/per step</td>
<td>80 gram</td>
<td></td>
</tr>
<tr>
<td><strong>[OFFSET]</strong></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>To set or modify the distance between the blade tip and the center axis.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>0.000~1.000mm</td>
<td>0.275mm</td>
<td></td>
</tr>
<tr>
<td><strong>[Arrow Keys]</strong></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>1. To move the tool carriage position on X or Y axis.</td>

<td><strong>Save Parameter</strong></td>
<td>To save pattern(s) of cutting parameters for later use. There are 4 sets of parameters saved in the panel. Use Page Up and Page Down keys to select the set of parameters you wish to adjust, press “Enter” to confirm (the number shown on the upper left corner will change accordingly). Each set of parameters includes Speed, Force, Offset, Up Speed, Quality and Scaling though the latter three will not be displayed in this section. To adjust or check individual parameters, go back to the responding keys on the panel and press “Enter” to confirm.</td>
<td>Patterns1~4</td>
<td>Pattern 1</td>
</tr>
<tr>
<td><strong>Set Smoothing Cut</strong></td>
<td>To enable smooth-cutting function.</td>
<td></td>
<td>Enable</td>
</tr>
<tr>
<td><strong>Over Cut</strong></td>
<td>To generate an overcut to facilitate weeding.</td>
<td>0.00mm-1.00mm 0.05mm/per step</td>
<td>0.00mm</td>
</tr>
<tr>
<td><strong>Set Tangential Mode</strong></td>
<td>To enable the emulated tangential-cutting mode for thicker media types and small letter cuts. Note: while the Offset value setting at 0.000 mm, “Set Tangential Mode” will automatically be disabled.</td>
<td>Enable</td>
<td></td>
</tr>
</tbody>
</table>
| **Pouncing** | To make perforated patterns.  
* In order to use this function, Pouncing tool must be installed.  
* Before start pouncing, place pouncing strip on top of the cutting pad to protect the cutting pad.  
* Set the value as 0 mm to disable the pouncing mode.  
* Pouncing tool is an optional item. | 0~200mm | 0mm |  
| **Panel Setup** | Accept setup command:  
To accept commands of the Force, Speed, Cutting Quality, and Offset only via software.  
Control panel only:  
To accept commands of the Force, Speed, Cutting Quality, and Offset only via control panel of the cutter. |  |  |  
| **Restore Default** | To turn all parameters of the menu items to factory-default settings. | | |  
| [ MISC ] |  
| **Auto Unrolled Media** | To avoid paper jam and motor crash by automatically unroll media (50cm and up) before cutting while enabled.  
* Auto-unroll only effects on roll/edge media.  
* Using Single mode to size media will disable this function automatically.  
* If the length of the rolled media is less than 2 meters or the weight is light, it is recommended to set this mode disabled. | Enable |  
| **Rear Paper Sensor** | To detect if the rear paper sensor is covered to determine the following process; when it is enabled, the cutter will detect if the material has covered the rear paper sensor under the Roll and Edge mode; when disabled, the rear paper sensor will not be functioning.  
Note: Rear paper sensor only functions under “Roll” and “Edge” mode. | Enable | Disable |  
<p>| <strong>Vacuum</strong> | To help improve tracking and cutting accuracy by turning on the fans. If you turn off the vacuum system, the fans will remain inactive during cutting or plotting. | | Enable |<br />
| <strong>First Back to Origin</strong> | To enable the carriage back to the previous origin; when “Enable” is selected, the carriage will not go back to the | Enable | Disable |</p>

| Firmware Version | To display the version number of Firmware and FPGA code. |  |
| Paper Saving Mode | To save media by four different modes: | Both unexpanded mode |
| 1. Length expanded mode | 2. Width expanded mode |  |
| 3. Both expanded mode | 4. Both unexpanded mode |  |
| Select Language | To select displayed languages on LCM panel in English and Chinese | English |
|  |  | Chinese |
| Select Units | Provide four-unit systems for users convenient. | cm/gram; inch/oz; cm/oz; inch/gram |
| Image Scale Length | To adjust the image scale of media length and width that may cause by the thickness of the media. | 500/500 mm |
|  | The Numerator is the ideal length, and the Denominator is the actual length measured from the resultant. |  |
|  | For example, cutting a line with 500.0 mm length. The procedure as follows: |  |
|  | 1. Press the [LEFT ARROW] to choose the Numerator and select 500.0 mm, |  |
|  | 2. Cut the length by sending a graph file, |  |
|  | 3. Measure the length then use the [RIGHT ARROW] key to choose the Denominator, then |  |
|  | 4. Press [UP ARROW /DOWN ARROW] to change the values of the actual length. |  |
| Scale Length | Fixed scaling, for maintenance only. |  |
| Scale Width |  |  |

| [ CUT TEST ] |  |  |
| Square Cut | To perform a cutting test at present blade position. |  |
| For more information, please refer to “2.7 Adjusting the Cutting Force and Offset” to adjust blade force and cutting speed. |  |  |
| Repeat Last Plot | Recut: To repeat the last job without re-sending the data. | 1~99; 1 per step |
### Copy:
To copy the last job without re-sending the data.  
* 1mm gap will be auto-generated between 2 copies.  
* If the media length is not enough to continue, it will show below message on LCM:

```
Out Of Space; # of Copies finished
```
* If both functions are enabled at the same time, the cutter will perform the last setting only.

| Pattern Setting | To provide two patterns for cut test  
|-----------------|---------------------------------------------------------|-------------------------------------------------|---------|
|                 | Note: It is recommended to select “Cross” if you are working on thick pieces of materials. | “Arrow” and “Cross” patterns | “Arrow”  
|                 | Note: the default pattern for Jaguar II_61/101/132SC is “Cross” | | Note: the default pattern for Jaguar II_61/101/132SC is “Cross” |

### Ratio Setting
To adjust the size of the pattern  
100%, 200%, 300%, 400%  
100%

### Blade Length Adjust
To adjust the length of the blade  
1. Keep your blade length as 0 before you start adjusting.  
2. Test the blade holder first and then test the blade length by pressing ENTER.  
3. Keep the blade holder at the same position when you perform blade holder and blade length tests.  
4. When blade holder and blade length tests are finished, the screen will show you to what degree (the unit of the value following “CW” or “CCW” is “circle”) and in which direction [CW (clockwise) or CCW (counterclockwise)] you should turn the adjustment knob.  
   EG, Turn CW 0.5 is telling you that you should turn the knob for half a circle clockwise.  
5. The value on the screen will be 0.0 when the blade length is perfect and no more adjustment needs to be made. You may start cutting at this point.

| Blade Length Adjust | To adjust the length of the blade  
|---------------------|---------------------------------------------------------|-------------------------------------------------|---------|
|                     | Note: 1. Keep your blade length as 0 before you start adjusting.  
|                     | 2. Test the blade holder first and then test the blade length by pressing ENTER.  
|                     | 3. Keep the blade holder at the same position when you perform blade holder and blade length tests.  
|                     | 4. When blade holder and blade length tests are finished, the screen will show you to what degree (the unit of the value following “CW” or “CCW” is “circle”) and in which direction [CW (clockwise) or CCW (counterclockwise)] you should turn the adjustment knob.  
|                     | EG, Turn CW 0.5 is telling you that you should turn the knob for half a circle clockwise.  
|                     | 5. The value on the screen will be 0.0 when the blade length is perfect and no more adjustment needs to be made. You may start cutting at this point. | 0.00mm-5.00mm | 0.00mm |
4. Connection

The cutting plotter communicates with a computer through a **USB (Universal Serial Bus)** or a **Serial port (RS-232C)**. This chapter shows you how to connect the cutting plotter to a host computer and how to set up the computer/cutting plotter interconnection.

!! Notice: When USB connection is enabled, serial port will be disabled automatically.

---

4.1 USB Interface

Jaguar II build-in USB interface are based on the Universal Serial Bus Specifications Revision 1.1. (Operation system of Windows 95, Windows NT don’t support USB).

- USB driver installation
  
  **Caution!!**
  
  ✓ If you are using Windows 8/ 7/ Vista/ XP/ 2000 as your operating system, make sure you log in using the “Administrator” account.

Use the USB One-click Installation for quick driver installation. Follow the simple steps below for driver setup.

  **Step 1:**
Connecting your GCC cutter
1. Turn on the machine.
2. Connect the USB connector to the machine and then USB driver will installed automatically. It will take a few minutes to find the device. Please DO NOT disconnect the USB cable until the installation has completed.
3. You can double click the USB icon on the taskbar to make sure the USB device is detected.

Step 2: Installing the software
(1) Put the installation CD into your CD-ROM. Please make sure that the USB device is connected before you start the driver installation.

(2) Choose the model you want to install from the driver list and click on Win 8/ 7/ Vista/ XP Driver (Manual Selection) or Win 8/ 7/ Vista/ XP Driver (Automatic detection) to start installing the Driver and AAS plugin.
(3) Click “Next” to start the driver installation.

(4) The installation will take a few minutes to complete and you will see a message below and click on “OK” upon completion. Enjoy your GCC cutter!
Note:
(1) If the driver is being installed for a second time, the user will be prompted as to whether a second copy of the driver installation is required.

(2) If the user selects yes, a second copy of the driver will be installed.

For users who have upgraded Adobe Illustrator or CorelDRAW, please go to the AAS Installer page in the Properties window and click Install to access the latest version of GCC AAS Plugin.
4.2 Driver Un-installation
You have to remove previous version driver installed on your PC system completely before you can install the latest version successfully. Please refer to below steps.

1. Right click on the printer to remove the printer from system Printer page.

2. After removing the unit, right click on any empty space on the page and select “Server Property”
3. Select “Driver” page
Select the model and click on “Remove”.

Click on “OK”

Click on “Yes”

The driver installed on PC is completely removed.
4.3 RS-232 Interface

- Connecting to the RS-232 (Serial) Port

1. For IBM PC, PS/2 users or compatibles, connect the RS-232C cable to the serial connector of the assigned serial port (COM1 or COM2) of your host computer.
2. Set up the communication parameters (Baud Rate and Data Bits/Parity) to match the setting of software package, refer to chapter 3 – “Misc” key description.

**Caution!! Please turn off the plotter before plugging the RS-232C cable.**

4.4 Data Transmitting

There are two options to transmit the data from the computer to the cutting plotter:

**Option 1:** With proper interface settings, the data can be transmitted from your application software package to the cutting plotters directly.

**Option 2:** Most cutting software packages are able to emulate HP-GL or HP-GL/2 commands, therefore. As long as the file is HP-GL or HP-GL/2 format, the cutting plotter can output the data precisely.

4.5 Printer Sever Shared Setting

In “A-PC”, set the printer driver as a shared printer, then use B-PC to connect A-PC’s printer driver via internet.

![Diagram of connection between A-PC, B-PC, and plotter via internet]
Step 1.
Please set A-PC’s printer driver to shared printer. (Right-click on printer icon, choose “Printer properties”. Click “Sharing” tab then check “Share this printer”)

Step 2.
Click “Advanced” tab, then choose “Print directly to the printer” option.
Step 3.
Send a job to the machine to check if A-PC is connected to the machine.

Try to send a job to check if the port is working.

Step 4.
Activate A-PC’s Printer Driver from B-PC’s Network.

Step 5.
Right-click on printer icon, and select “Connect” to connect A-PC’s printer.
4.6 Jaguar II Print Driver setting
4.6.1 Jaguar II Print Driver setting>Option Page

File Function:
The file function section allows users to set the parameters of Speed, Force, Offset and Quality for later use. This section is useful when performing repeated jobs on a variety of objects, allowing you to save your frequently used cutter parameters and load them in the future.

• Custom Media: This section lists the files for the parameter settings that you have recently created and worked. You can save more than 50 files to simplify your cutting job.

• Default: This section contains the reference settings that are applicable with the verified materials to achieve the best cutting results. Please note that the setting value might need to be adjusted according to different suppliers of materials.

• SAVE: This function will save current print driver parameter settings to a file under the specified location on your computer. (Saved parameter setting files will be tagged with the Jaguar series extension)

• LOAD: This function allows you to load previously saved print driver parameters.

• ORIGINAL: This function will load the print driver’s original factory parameter settings.

• SAVE TO DEFAULT: This function allows you to save your current print driver parameters as the default startup settings.

• DELETE: This function will delete the file you select from the Custom Media section, whereas the settings in Default section cannot be deleted. Please note the delete function only removes the list shown in Custom Media section, it does not remove the file from your hard drive, if you wish to completely remove the file from your hard disk, you will have to manually delete the file from your operating system.

Die Cut
The Die Cut function must be activated with the Kiss Cut function to avoid the falling of cut-through materials and material jam beneath the carriage. Die Cut helps you to cut through the backing of the material while Kiss Cut cuts through only the top layer but not the backing. This will leave only tiny bits of the backing attached to the top layer, creating complete individual patterns with backing sheets (see figure 1 and 2).
Figure 1

Figure 2
To activate the Die Cut function, go to “Option”, tick “Die Cut”, and enter the amount you wish for the “Length” and “Force” of both Die Cut and Kiss Cut, then click “OK” (see figure 3).

![Figure 3](image)

*Note:
The length setting for the cutting line of Die Cut is in the range of 0-2000mm whereas that of Kiss Cut is 0-100mm.

**Figure 3**

When the job is completed and you untick the Die Cut function, you will be able to adjust the pen speed, pen force, and offset in the section on the top following normal operating procedures (see figure 4).

![Figure 4](image)

**Note:**
1. The extension of the blade has to be set to cut through both the top layer and the backing in the very beginning. You then adjust the tool force for the best cutting performance.
2. Once the Die Cut function is activated, it will perform on all the line segments on the object.
### 4.7 Reference Parameter setting for different materials

The following reference parameter is used on GCC verified materials shown in the table.

This chapter explains the basic maintenance (i.e. cleaning the cutting plotter) required for the cutting plotter. Except for the procedures mentioned below, all other maintenance must be performed by a qualified service technician.

5.1 Cleaning the Cutting Plotter
Cleaning the machine properly and regularly will ensure optimal performance out of your machine.

Cleaning Precaution!

- Unplug the cutting plotter before cleaning it in order to prevent electrical shock.
- Never use solvents, abrasive cleaners or strong detergents for cleaning. They may damage the surface of the cutting plotter and the moving parts.

Recommended Methods:
- Gently wipe the cutting plotter surface with a lint-free cloth. If necessary, with a damp cloth immersed in water or alcohol. Dry and wipe any remaining residue off a soft, lint-free cloth.
- Wipe all dust and dirt from the tool carriage rails.
- Use a vacuum cleaner to empty any accumulated dirt and media residue beneath the pinch roller housing.
- Clean the platen, paper sensors and pinch rollers with a damp cloth immersed in water or alcohol, and dry with a soft, lint-free cloth.
- Wipe dust and dirt from the stand.
5.2 Cleaning the Grid Drum

1. Turn off the cutting plotter, and move the tool carriage away from the area needed to be cleaned.

2. Raise the pinch rollers and move them away from the grid drum for cleaning.

3. Use a bristle brush (a toothbrush is acceptable) to remove dust from the drum surface. Rotate the drum manually while cleaning. Refer to Figure 5-1.

5.3 Cleaning the Pinch Rollers

1. If the pinch rollers require a thorough cleaning, use a lint-free cloth or cotton swab to wipe away the accumulated dust from the rubber portion of the pinch rollers. To prevent the pinch rollers from rotating while cleaning, use your finger to hold the pinch rollers to prevent them from rotation.

2. To remove the deeply-embedded or persistent dust, use the lint-free cloth or cotton swab moistened with rubbing alcohol.

Note: The daily maintenance of your cutting plotter is very important. Be sure to clean up the grid drum and pinch rollers regularly for better cutting accuracy and output quality.
This chapter is to help you correct some common problems you may come across. Prior to getting into the details of this chapter, please be sure that your application environment is compatible with the cutting plotter.

**Note:**
Before having your cutting plotter serviced, please make certain that the malfunction is in your cutting plotter, not the result of an interface problem or a malfunction in your computer or a software problem.

Why is the cutting plotter not functioning?

**Possible Causes:**

**6.1 Non-Operational Problems**

Check the following first:
- Does the AC power cord plug in properly?
- Does the AC power cord connected to the power connector properly?
- Does the power LED still illuminate?

**Solutions:**

If the LCM is able to display the message, the cutting plotter should be in a normal condition. Switch off the cutting plotter and turn it on again to see if the problem still existing.
If the LCM is not able to display any message, contact the technician from your dealer.
6.2 Operational Problems

Some mechanical problems or failure during operation will cause some problems. The error messages shown on the LCM present the problem first, and followed by recommended actions. If the problem still exists after the recommended actions have been done, have your cutting plotter serviced.

**Error, Check Media Or Drum or X Motor**

This message indicates that there might be a problem on the X axis. Check if the drum is working well and if the media is well loaded. Correct the problem and re-power on to reboot system.

**Error, Check Media Or Y Motor**

This message indicates that there might be an obstruction to carriage relating to a problem on the Y axis. Correct the problem and re-power on to reboot system.

**Error, Check Carriage Sensor or VC Motor**

This message indicates that the blade up/down sensor malfunction. Re-power on to re-boot system. If the problem still exists, find a serviceman.

**Graph Was Clipped. Data In Buffer**

This message indicates that the cutting exceeds the cutting limit. Reload larger media or re-scale the plot to a smaller size; then press the key followed by the display of LCM to continue.
6.3 Cutting Plotter/Computer Communication Problems

The messages showed below present problems in relation to cutting plotter/computer communication.

Communication Error
Setup: **MISC.** key

<table>
<thead>
<tr>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Is the connection cable connected to the cutting plotter and computer properly?</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Has the interface setting been done correctly?</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Try the communication between your cutting plotter and computer. If it still does not work, have your cutting plotter serviced.</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Refer to Chapter 4 - Connecting your cutting plotter.</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Refer to the &quot;<strong>MISC</strong>&quot; key in Chapter 3 - Description of Operation for the port setup.</strong></td>
<td></td>
</tr>
</tbody>
</table>

**Note:**
The computer also needs to set up compatible communication parameters to the cutting plotter set up.

**HP-GL/2 Cmd. Error**

If your cutting plotter can not recognize the HP-GL/2 or HP-GL commands, please check the HP-GL/2 or HP-GL commands applied to your cutting plotter are used properly.
6.4 Software Problems

Check the following first:

- Does your software package indicate that it will work with your computer and cutting plotter?
  - Yes
  - No

- Does the cutting plotter interface match the requirements of your software?
  - Yes
  - No

- Does your software recommend using a different cable?
  - Yes
  - No

- Try using the recommended cable.

- Does the software vendor provide a sample file?
  - Yes
  - No

- Re-power on the cutting plotter and try to send the file again.

- Most well known cutting softwares in the world have drivers for our cutting plotters. If not, use software that has HP-GL and HP-GL/2 emulation supports and you can choose the following three drivers:
  - A3 size: HP7475A
  - A1 size: HP7580A
  - A0 size: HP Draf Pro Exl or HP Draf Master

- Refer to Chapter 2 - Connecting your cutting plotter.

- Do something about the error message display on LCM, or consult your software vendor.
6.5 Cutting Quality Problems

Note: The daily maintenance of your cutting plotter is very important. Be sure to clean up the grid drum and pinch rollers regularly for better cutting accuracy and output quality.

Is the blade installed correctly and the blade holder fastened securely?

Yes

Is the blade dull or chipped?

Yes

Replace with a new blade

No

Refer to Chapter 2.4 “Blade Installation”

Is tool force set up properly? (The default for tool force is 80 gf)

Yes

Is the tool offset set up properly?

Yes

Adjust the tool offset to obtain an optimum value.

No

Adjust the tool force to obtain an optimum blade force. Refer to Chapter 2.7 “Cutting Force and Offset Adjustment”

Is there any dirt adhered to the blade?

Yes

Remove the blade and clean it.

No

Please contact your dealer for technician support.
## Jaguar II Specification

</tbody>
</table>

- Compatible with Windows 2000/ XP/ Vista/ 7/ 8 and MAC OS X 10.4-10.7.
- The specification and data sheet may vary with different materials used. In order to obtain the best output quality, please maintain the machine regularly and properly.
- GCC reserves the right to change the specifications at any time without notice.
- The above listed specification values are effective only when operated with media certified by GCC.
About the Tool

A generic term referring to the blade that cuts the sheet, the pen that does plotting, and the LED bombsight (option) used for pointing to the reference point.

OFFSET is the distance that the blade tip is displaced from the centerline of the blade.

![Diagram of Blade Specification](image)

Protrusion Length of the Blade

Length of protrusion = t1 + t2/2, but for your convenience you may just make it about 0.3mm ~ 0.5mm beyond the blade holder tip.

DirectCut Instruction

DirectCut Mac AI Plug-in is compatible with MAC OS X 10.4-10.7 (operated with Adobe Illustrator CS2-CS5).

If you want to use Adobe Illustrator CS6 on your MAC, you may need Parallels Desktop software, Window OS and Windows based Adobe Illustrator CS6 to install Windows OS in your MAC computer and run Windows based software under MAC computer.

User Instructions

Follow the simple steps below to complete your output settings:

Step 1. Run DirectCut

1) Go to File and select “Show DirectCut Tools” under “DirectCut”
Step 2. Create/ import your image/ file.
For texts
1) Enter your texts in Adobe Illustrator, select the letters and click [Text outline] to outline the letters.

A contour line will be created for your image.

Note: The line width must be set as 0.001 mm
For Images

1) Open a new image on Illustrator and decide the size of your material.

2) Select the image and click [Make outline and offset] to create outlines of graphics.

Outlines will be created for your image.
3) Click on the image and apply the AAS function by clicking the [Add registration marks] command and select the registration marks needed.

The registration marks will be created as below.
Step 3. Output

1) Click on [Plotter Setup] and select the correct model in [Plotter List].

2) Tick Default Environment to create Pen No.1 in the Pen section. Double click Pen No.1 and complete your parameter settings.
3) Select the entire object and click [Plotter Output].

4) Output the object by clicking [Export] and GCC Cutting Plotter will start cutting the image.
